

SEPTIKON

URANIUM WARS

Protect your
Uranium mine

The game set contains:

- The gaming field
- 80 damage tokens
- 20 satellite and energy-shield tokens
- 166 resource cubes (oxygen, biomass, energy, bio-drones, metal and uranium)
- 28 clone figures
- 2 gaming dice
- Game rules

Each player is a prospector who owns a personal space station. He works together with his clones on a dangerous and risky job. The biggest problem lies in his competitors who try to take away everything that has been earned through honest hard labor.

There are a number of strategies that a player can use to try to win: destroy an opponent's storage with lasers, kill his space crew with a sudden attack, create and launch nuclear missiles, use defensive tactics to anticipate when an opponent will run out of resources, send spies, and much, much more.

The game is unique and there is nothing like it in the world. It was invented 12 years ago and has evolved into its current state through hundreds of test games.
